

The **Bar BMount** is a clever mount, that enables the easy setting of TPL Vision's LED bars in machine vision systems. Thanks to the **Bar BMount**, you can adjust the angle of incidence precisely (from 0° to 60°), using the dedicated holes (1 hole every 10°).

But you can also choose to use the groove located under the holes, to set the light freely, from 0° to 60°. Both handy and robust, the **Bar BMount** is also an affordable accessory.
